## **FRANKLIN, TENN COMPANY TO BE FEATURED ON INTERNATIONAL TV SHOW: "HOW IT'S MADE"**

FRANKLIN, Tenn. - The Lite Cylinder Co., a Franklin-based propane cylinder manufacturer, will be featured on The Science Channel's popular show "How It's Made," premiering January 21, 2011.

"We are excited for the Lite Cylinder make its television debut on How It's Made, said Darrel Reifschneider, Lite Cylinder CEO. "It is an excellent opportunity to show an international audience our unique product made start-to-finish right here in Franklin."

The "How It's Made" film crew visited the Lite Cylinder's manufacturing facility in July to capture the entire manufacturing process. Hours of footage were condensed into an informative four-and-a-half minute segment detailing the intricate manufacturing and testing procedures to create a cylinder.

The Lite Cylinder is a propane cylinder made of a composite material that is translucent so propane levels are always visible, 30 percent lighter than steel cylinders and will not rust. The cylinders are perfect for grilling, boating, camping and hunting.

The segment will premiere Friday, January 21, at 9 p.m. EST, 8 p.m. CST, on The Science Channel. Visit <http://science.discovery.com> for additional air times.

Founded in 2002, the Lite Cylinder Company manufactures tens of thousands of cylinders in the US for distribution worldwide. Cylinders are made in 10, 20, 25 and 33 pound sizes. The company is approved by the Department of Transportation, Transport Canada, as well as two European standards. For more information, visit [www.litecylinder.com](http://www.litecylinder.com) or call (866) 412-LITE (5483).
